Professional Summary

Full-stack software engineer with 4 years delivering fintech solutions across **Angular** and **Spring Boot**. Founding engineer on a live banking product. Drives end-to-end ownership — from architecting component systems to stabilising production environments.

Professional Experience

Software Engineer

June 2025 – Present

Finastra

Bengaluru, India

- Developed 15+ reusable Angular components and utilities across 5 apps — eliminated ~30% of repetitive setup work and helped other devs move faster.
- Led Angular v16 to v20 migration across 70+ files — corrected breaking changes, migrated deprecated module patterns, and updated 3rd-party dependencies; used GitHub Copilot to accelerate repetitive migration tasks across 50+ files, completing the upgrade with 0 regressions.
- Triaged and fixed 1100+ SonarQube violations and 15+ Spring Boot production bugs, significantly reducing escalations from client-facing teams.
- Drove UI coverage from ~30% to ~90% by setting up Jest from scratch and introducing AI-assisted test generation workflows, reducing post-release defects by ~25% and speeding up delivery by ~20%.
- Contributed to quarterly release cycles by managing Docker image promotions across dev and QA and Pre-prod environments.

Associate Software Engineer

July 2022 – June 2025

Finastra

Bengaluru, India

- Owned feature delivery end-to-end across Angular, Java, and Spring Boot — resolved 80+ bugs and shipped across every release cycle over three years.
- Engineered 3 internal Angular libraries adopted across squads — eliminated the need to rewrite shared interceptors, form controls, and directives for every new feature.
- Optimized frontend performance using lazy loading and OnPush change detection — slashed initial load time by ~30%, which made a real difference during client demos.
- Collaborated with backend engineers to align Angular service contracts with REST API schemas during sprint planning, reducing integration-layer bugs in QA cycles by ~15%.

Software Engineer Intern

Jan 2022 – July 2022

Finastra

Bengaluru, India

- Joined during early product build, delivered production-ready UI components and validations within the first few months, and converted to full-time based on that work.

Technical Skills

Frontend Technologies: JavaScript, TypeScript, Angular, Angular CLI, HTML5, CSS, Jest, React

Backend & API Development: Java, Spring Boot, REST APIs, API Integration

Development Tools: Git, GitHub, Chrome DevTools, Postman, JIRA, Visual Studio Code

Programming Languages: Java (Core), C++ (Basic), SQL

Additional Skills: Data Structure, Algorithms, Agile Methodologies, Software Development

Projects

ESG Service — Sustainability-Linked Lending Platform

Associated with Finastra

- Founding engineer on a platform live with 5 banks — delivered every release from MVP onwards and built core product modules from the ground up.
- Architected complex UI workflows for pricing logic, approvals, change requests, delayed reporting, revised reporting, and audit history.
- Crafted reusable Angular components, directives, and validations across forms, tables, attachments, and approval screens.

Education

Bachelor of Technology in Computer Science Engineering

July 2018 – May 2022

Institute of Technical Education and Research, Bhubaneswar

CGPA: 8.64/10.0
